Project Context - ICH NGO Forum Website

Project

ICH NGO Forum Website

Website: https://www.ichngoforum.org/

About the Organisation

The ICH NGO Forum is a platform for communication, networking, exchange, and cooperation among NGOs accredited by UNESCO to provide advisory services to the Intergovernmental Committee in the framework of the 2003 UNESCO Convention for the Safeguarding of Intangible Cultural Heritage.

The Forum also welcomes NGOs active in the field of Intangible Cultural Heritage (ICH) that are in the process of accreditation.

Its activities include communication and knowledge sharing among NGOs, meetings and symposia, networking, sharing safeguarding practices and initiatives, and following the implementation and evolution of the 2003 Convention.

Website Purpose

The website functions as an information, communication, and resource platform for the ICH NGO Forum.

Based on the current website, its content includes:

- Forum news and updates
- Events, webinars, symposiums, and calls for participation
- Information about accredited NGOs
- Resources related to safeguarding living cultural traditions
- Information about the UNESCO 2003 Convention
- Forum activities and working groups
- Publications and knowledge-sharing initiatives such as #HeritageAlive
- Opportunities for NGOs to participate in and contribute to Forum activities

The website therefore needs to support both information discovery and access to the Forum's wider network, activities, and resources.

Likely User Groups

Based on the organisation and the content available on the website, relevant users may include:

- Representatives of UNESCO-accredited NGOs
- NGOs working toward accreditation
- Intangible Cultural Heritage practitioners and professionals
- Researchers and experts working with living heritage
- Community organisations and cultural practitioners
- People looking for Forum news, events, resources, publications, or opportunities to participate

These user groups are contextual assumptions derived from the organisation and website content. They should not be treated as validated user-research findings.

Evaluation Scope

For this workflow run, evaluate the supplied screenshot of the current ICH NGO Forum homepage.

The screenshot should be treated as the primary visual evidence for the interface evaluation.

The live website URL is supplied as project context and reference.

Do not assume that interactions, responsive behaviour, hidden states, or pages not visible in the supplied screenshot have been evaluated unless they are explicitly inspected or supplied as additional evidence.

Design Material Supplied

- Homepage screenshot
- Live website URL
- This project-context document

Known Requirements

No formal redesign brief, analytics data, usability-test findings, stakeholder feedback, user-research findings, or documented business requirements have been supplied for this run.

The existing website and organisational information establish context, but should not be treated as evidence of validated user behaviour.

Evaluation Goal

Evaluate the current homepage to identify meaningful UX/UI issues that may affect:

- understanding of the website and organisation
- content discovery
- navigation and orientation
- information hierarchy
- readability and scanability
- clarity of actions
- consistency
- accessibility where reasonably observable from the supplied evidence

The evaluation should distinguish between:

- observable design evidence
- supplied organisational/project context
- UX/UI evaluation inference
- uncertainty or areas requiring validation

Do not treat deviation from a general UX principle as a problem by itself.

Constraints and Unknowns

The following are not established by the supplied project material:

- website analytics
- conversion or engagement targets
- technical/platform constraints

- redesign budget or timeline
- internal stakeholder priorities
- validated user personas
- validated user journeys
- usability-test results
- accessibility audit results
- device/browser usage distribution

Do not invent these.

Where lack of evidence prevents a confident conclusion, preserve the uncertainty rather than turning it into a confirmed design problem.
